

METHOD AND APPARATUS FOR DYNAMICALLY DELIVERING SERVICE PROFILES TO CLIENTS

ABSTRACT

One embodiment of the present invention provides a system that facilitates dynamic delivery of service profiles to a client. During operation, the system performs a discovery operation to allow the client to discover new services on a network. If a new service is discovered for which the client does not possess a service profile, the client obtains the service profile from the new service and subsequently installs it, thereby enabling the client to interact with the new service.
